

## UPVC COATING

UPVC looks great when it's new but after years of being exposed to sunlight and rain, the UPVC plastic will fade and discolour. The shine is lost, and it starts to look worn no matter how much you clean it. At this point many homeowners choose to replace their UPVC units at a considerable cost.

Pro UPVC aerosols have been specially developed to give your windows, doors and conservatories a new lease of life, this fast drying, coloured coating that adheres direct to UPVC gives a durable Semi-Gloss (65 - 70%) UV and weather resistant flexible finish that will look great for years to come.

### Features and Benefits

**Direct adhesion – no need for any primers or adhesion aids**

**Very fast drying – minimal disruption**

**Highly flexible – resistant to cracking**

**Easy to apply – doesn't need professional application**

**Excellent durability & colour retention – gives UPVC a new lease of life**

Ideal for the renovation and recolouring of

- UPVC Doors
- UPVC Windows & Frames
- UPVC Conservatories
- UPVC & Plastic Fascias
- Plastisol Exterior Cladding
- Plastic Downpipes & Gutters
- Plastic Furniture
